A FREE GUIDE FROM CAT 5 STEEL BUILDINGS

Before You Sign With an Unvetted Steel Building Company

Read this first. 8 things to check before you sign any steel building contract, from anyone, including us.

FAMILY-OWNED · VETERAN-OWNED · PERRY, FLORIDA

A quick note before you read

You're probably about to spend real money on a steel building. You can buy one from a lot of places online, and some of them are solid. Others are a website and a phone number, with no idea who will actually build, install or stand behind your building.

This guide is how to tell the difference. Use it on every quote you get, ours included. If a company can answer every question here clearly and in writing, you're in good hands. If it can't, keep shopping.

The Cat 5 family, Perry, Florida

8 things to check before you sign

1 Who actually makes and installs the building?

Many sellers don't build anything. That's fine, as long as they tell you exactly which manufacturer makes your building and whose crew installs it. A company that won't name the manufacturer is a red flag.

> **How Cat 5 does it:** we sell only through established manufacturers we've vetted. Your quote names the manufacturer, and their crews install your building.

2 Is it engineered and wind-certified for your address?

Wind and snow ratings depend on where the building goes. Ask for the certified rating in writing, and for engineered drawings your county will accept.

> **How Cat 5 does it:** every building we sell is certified, and the wind rating is printed on your quote. Florida buildings are quoted at 170 MPH, with higher ratings available on some models.

3 Who handles plans and permits?

Most counties need a permit, and many need engineered plans. Find out who prepares the plans, who files the paperwork, and what's included.

> **How Cat 5 does it:** we help with plans and the permit paperwork. Permit, impact and inspection fees are set by your county and paid to the county.

4 Will the concrete match the building?

The slab and anchors have to match the building's engineering, or the wind rating doesn't mean much. "Find your own concrete guy" leaves you to manage it.

> **How Cat 5 does it:** we can quote your slab with your building, poured by a trusted local contractor and confirmed after a site visit. Excavation, haul-off and heavy grading are priced separately once the site is seen.

5 Is every cost in writing?

A low price can hide a lot: install, delivery, doors, anchors, plans, tax. Get an itemized quote and know the total before you sign.

> **How Cat 5 does it:** your quote lists every option and shows the tax, the total, and the deposit to order.

6 Where does your money go?

Be careful with any company that wants most of the price up front. Ask how much is due now, who it's paid to, and when the balance is due.

> **How Cat 5 does it:** you pay a deposit to order. The balance is paid to the manufacturer at installation, and some larger orders have a payment due at scheduling. Your order form spells it out before you sign.

7 How long does the price hold, and are you being rushed?

Steel prices do change, so quotes have an expiration date. That's normal. Being pushed to sign today is not.

> **How Cat 5 does it:** your quote shows how long it's valid. Take the time you need, compare quotes, and call us with questions.

8 Is there financing that fits you?

Some companies offer one lender and that's it. More choices mean a better chance of a payment that works.

> **How Cat 5 does it:** apply online with lending partners such as HFS Financial and Acorn Finance (approved credit), or ask about rent-to-own options with no credit check. Terms are set by the lender.

The vetting test: 6 questions to ask anyone

Ask whoever you're talking to. If they can't answer clearly and put it in writing, walk away.

1. Which manufacturer makes my building, and whose crew installs it?

2. What wind rating is it certified for at my address, and can I see it in writing?

3. Who prepares the plans and helps with the permit, and what's not included?

4. Who pours the slab, and does it match the building's anchoring specs?

5. How much do I pay now, to whom, and when is the balance due?

6. Is every cost on the quote, including tax, delivery and install?

Ready to talk?

Bring us your other quotes. We'll walk through them with you, line by line, whether you buy from us or not.
